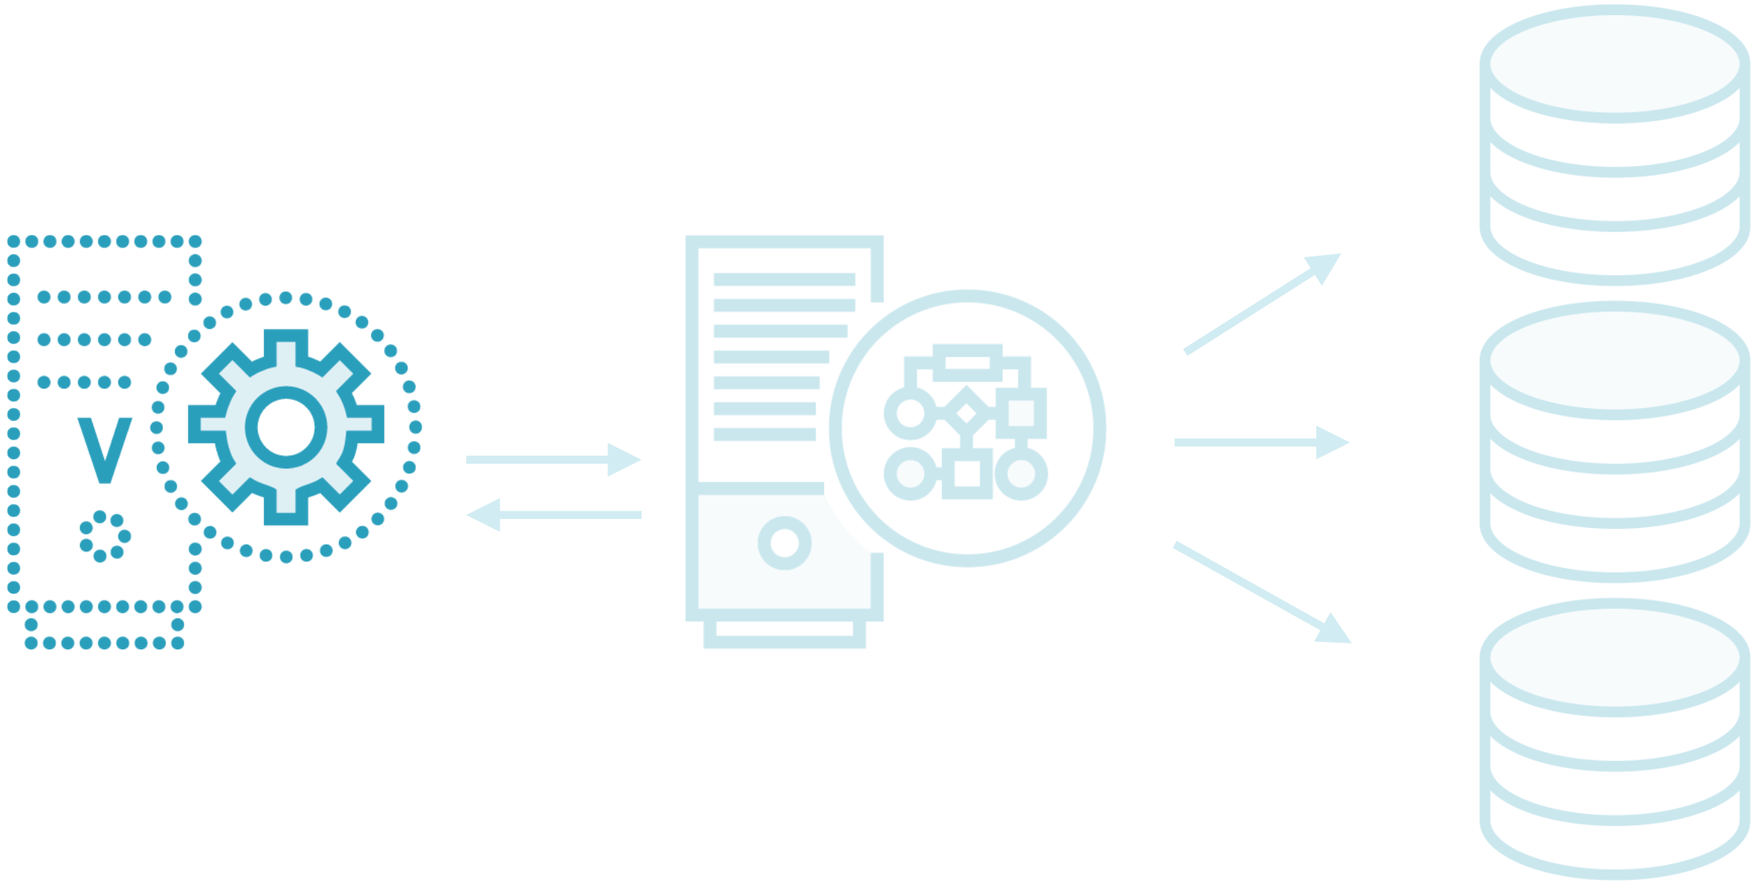
What Is a Controller?

What Is a Controller?



Interpret and transform

Access business logic

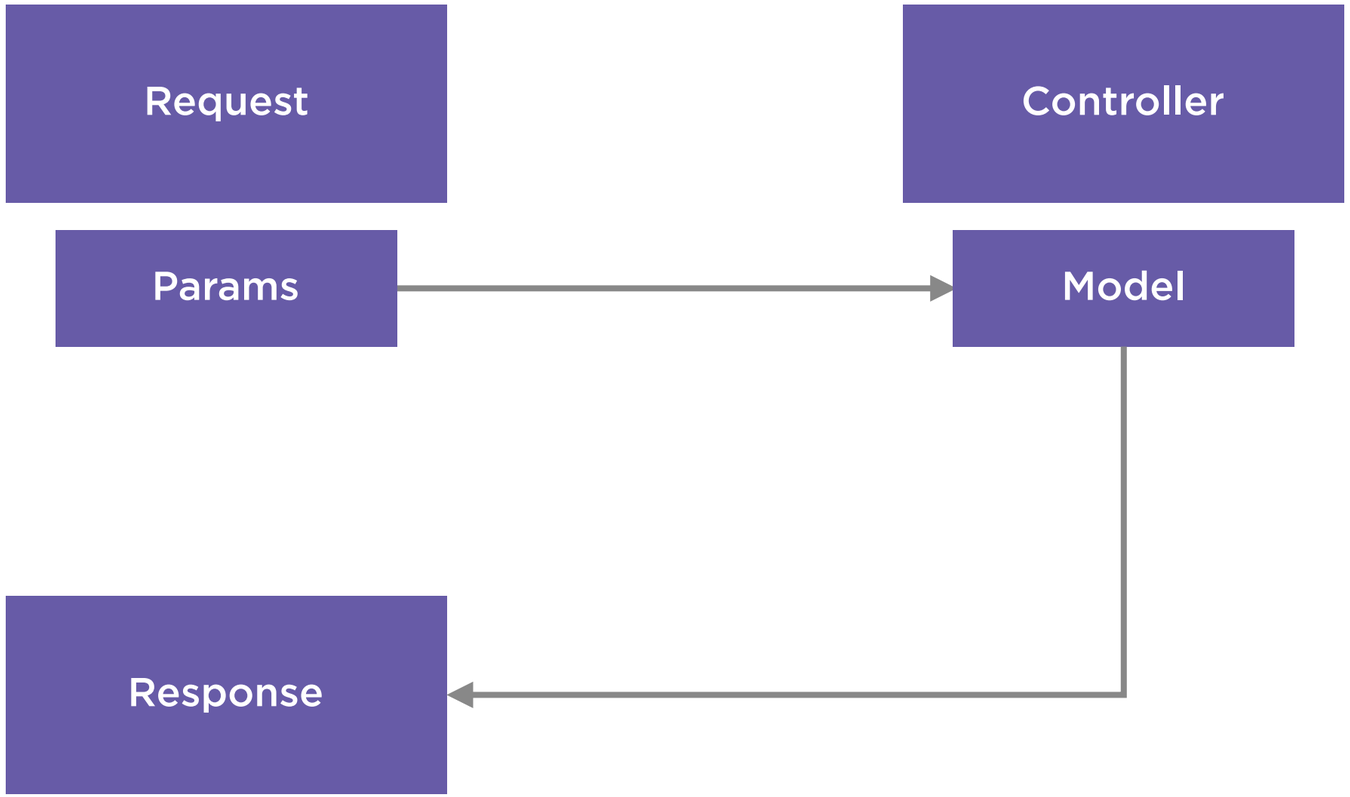
Determines view or response type

Interpret exceptions

@Controller

```
@Controller
public class GreetingController {
  @GetMapping(value = “/greeting”)
  public String greeting (Map<String,Object> model) {
```

Passing Parameters



@ModelAttribute

HTTP Get / @Get

HTTP Post / @Post

POJO based

Validated binding result

Summary

Controllers

Annotations

- @Controller
- @GetMapping
- @ModelAttribute
- @PostMapping
