RestController

```
@RestController
public class UserController {

    @GetMapping("/user")
    public User getUser(
        @RequestParam(value = "firstname", defaultValue = "Bryan")
        String firstname) {

        User user = new User();

        user.setFirstname(firstname);

        return user;
    }
}
```

jQuery

```
$(document).ready(function() {  
    $.ajax({  
        url: "http://localhost:8080/conference/user"  
    }).then(function(data) {  
        $(' .firstname' ).append(data.firstname);  
        $(' .lastname' ).append(data.lastname);  
        $(' .age' ).append(data.age);  
    });  
});
```
